

The full lighting package by Ozone Lighting Solutions

Design, Supply, Installation & Maintenance

Are you thinking of upgrading your existing lighting to LED but don't know where to start or are concerned by stories of poor quality luminaires with cheap imported LED's and LED drivers? Having forged partnerships with carefully selected UK manufacturers, Ozone Lighting Solutions offer a full design, supply, installation and maintenance service. Ozone can create the perfect balance between the light being produced from a luminaire and the comfort of the people working beneath it.

Ozone will carry out a detailed survey of your premises and design a bespoke solution for your building, the type of work application being performed and the level of light required from your staff – whether they are on the warehouse floor or office based. Not only will a design be produced in full compliance with CIBSE Lighting Guide, Ozone's lighting engineers will assess how the building functions to determine if occupancy detectors and dimming controls can be incorporated to save even more energy. Examples include areas where some natural light is present or movement of people is intermittent during business hours. With careful planning and using the cost of energy saved, Ozone's engineers will estimate how long it will take for the system to pay for itself.

LED lighting is being used in every sector and offers a very efficient light source, and continued improvements in LED technology and falling component costs are driving prices down. Ozone's LED luminaires are available in various colours, lumen packages and come with a 5 year warranty.

Ozone has its own fully accredited in-house installation and maintenance team who provide a swift, professional service. Dependent on the existing electrical installation, luminaires can be attached to the existing infrastructure or the installation can be rewired to suit the application. If final installation is not

required, the lighting system can be supplied along with technical advice.

Managing Director, Karl Oultram said "Do not be tempted to buy the cheapest light fittings as the quality of the luminaire is very important. The 'payback' calculation is significant to make your investment viable and choosing the right product will allow the investment to be offset against company tax in the first year. So whilst it might be tempting to buy cheap non energy-efficient luminaires, you will not be better off in the long term".
